## **DETAILED ACTION**

### ***Election/Restrictions***

Upon further consideration, the previous Restriction requirement is hereby vacated. The following new Restriction/Election requirement is deemed necessary which replaces the previous Restriction requirement:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14 and 16, drawn to a vast permutation of a modified amino-acid sequence compound, classified in class 514, subclass 2, for example.
- II. Claim 15, drawn to an antibody, classified in class 424, subclass 130.1, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the invention of Group I is drawn to a vast permutation of a modified amino-acid sequence compound, whereas the invention of Group II is drawn to an antibody, which is clearly distinct therefrom.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the

Art Unit: 1654

inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

This application also contains claims directed to the following patentably distinct species:

The vast permutation of distinct modified amino acid compounds encompassed by the claim language. The species are independent or distinct because each of the modified amino acid compounds encompassed by the claims are different and distinct structural compounds, each from the other (it should be noted that the claims, as drafted, are essentially unsearchable - to hasten prosecution, it is strongly suggested that the claims be amended so as to clearly define a searchable chemical entity).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species **[i.e., elect a single embodiment, with all structural features fully identified, including each and every variable so as to completely define a singular structurally compound]** for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-13 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an

Art Unit: 1654

allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
